Our Service

System Architectures provides contemporary and modern designs convey the environment of businesses and the architectural plans. Also provide best design solutions to approach clients design satisfaction

It focuses on providing high value, strategic technical advice and provide world-class technical excellence and project delivery skills on high scale. The environmental impact of our work is at the heart of our values.

OUR DESIGN & MANAGEMENT APPROACH

We adopt a collaborative approach working with the client, interested stakeholders and the building design teams to define a clear brief, which sets out the aims and objectives of the project and a program and budget that is site specific and realistic. Our approach is to achieve the best balance of quality, cost, function, efficiency, maintainability and project delivery.

1 Strategic Design

Early and close collaboration with the design team allows an overall design strategy to be developed and refined to reflect the whole building design and to add value.

2 Design

We use design/coordination workshops to develop high quality design proposals for inclusion in the employer's requirements with collaborative input from designers, installers and maintainers.

3 Procurement

Once design decisions have been made, we then consider selecting suppliers & sub-contractor and do procurement process.

4 Execution

We take a hands-on approach to the supervision and overseeing of the works with regular attendance at technical meetings with contractors.

5 Hand-over & Close out

We implement a 'zero-defects' policy and agree benchmark site installations and samples for quality to ensure the client gets the best possible project outcome.
